

Biamp TesiraFORTÉ DANTE VT4

The TesiraFORTÉ DAN VT4 is a digital audio server which provides extensive audio processing, including but not limited to: AEC technology, signal routing and mixing, equalisation, filtering, dynamics, and delay, as well as control, monitoring, and diagnostic tools; all configured through the Tesira configuration software.

The Benefits

- 32 bi-directional channels of Dante digital audio
- 4 analog inputs, 4 channels of Acoustic Echo Cancellation (AEC) technology, and 4 analog outputs
- 8 channels of configurable USB audio, a 2-channel VoIP interface and a standard FXO telephone interface
- Includes default configuration file allowing for plug-and-play usage
- Highly scalable and cost-effective solution that can grow over time with the needs of the customer
- SpeechSense technology to enhance speech processing
- Integrates directly with soft codecs and other USB audio hosts.

“*Biamp's release of the TesiraFORTE VT4 has revolutionised audio conferencing in small to medium meeting rooms. Not only is this product feature rich, it is also at a very affordable price point meaning any size office can enjoy premium audio conferencing capabilities - By far one of the best products of 2017!*”
