Data Centre in a Box

Data Centre in a Box is a state of the art pre-configured TS IT server / network rack with self contained air conditioning, PDU's, optional environmental monitoring and fire detection. Rittal, as a long-standing experienced system partner and supplier to the IT industry, provides an innovative solution to the IT environment and by offering this all-in-one solution, reduces costs and the need for additional mechanical services.

The Benefits

- Demand-orientated climate control ensures efficiency and low PUE

- Compact nature facilitates easy deployment and redeployment

- Standardised infrastructure supports simple operation for IT staff

- No need for external condensers and connecting pipework

- Complete solution ensures peace of mind from point of purchase, through installation and on-going maintenance.

> *This is a fantastic all-in-one product from Rittal that negates the requirement of external hardware meaning no need for landlord wayleaves or mechanical build services.*
>
> Cool the rack not the room! "
